

**SIP Energy Homes to showcase the latest developments in  
Structured Insulated Panels (SIP) Systems  
at the 2008 Energy Show.**

**Stand K-12**

March 2008

The 2008 Energy Show, organised by Sustainable Energy Ireland, is due to take place in the RDS Main Hall, Dublin on April 16<sup>th</sup> & 17<sup>th</sup>

Recent legislative changes impacting the building sector, namely the implementation of the Energy Performance of Buildings Directive (EPBD) include requirements to set minimum energy performance standards for new houses and commercial properties.

The SIP Energy Homes team will be on hand throughout the two-day event to highlight the energy benefits of building with (structured insulated panels) SIP's.

SIP's produce a *better insulated, faster to erect, more environmentally friendly house and their basic package can provide a high energy rating* than either timber frame or conventional building methods. SIP Energy Homes are the answer to a climate of spiralling increases in material labour and energy costs. Deciding to build a SIP Energy Home is not only a good decision now but a great decision for the future.

The Energy Show 2008 will be held at the RDS Main Hall, Dublin on:

- Wednesday 16th April 8.30am-6pm &
- Thursday 17th April 9am-5pm

Come and see us at Stand K12
